

Shenzhen Onething Launches a New Generation of Edge Intelligent Hardware

Media Report

Posted on January 4, 2023 Source: Onething

On January 3rd, 2023, Shenzhen Onething Technologies Company Limited (“Shenzhen Onething” or “Onething”), a wholly owned subsidiary of Xunlei Limited, launched a new generation of hardware product for edge computing, OneThing Edge Cube, or OEC, through an online conference. The launch of OEC not only enriches the product matrix of Onething’s cloud platform and its user experience, but also embodies the company’s continuing efforts to build a secure and proprietary algorithm infrastructure and construct a complete ecosystem for the edge computing industry.

OEC employs the edge computing technology developed by Onething. By intelligently deploying users’ idle network capacity, storage and computing resources, the technology can optimize the distribution of computing power on the edge cloud computing network. Users are rewarded according to the level of resources they contribute to the network. Compared with the previous generations of products, OEC’s performance has been greatly improved and users can easily obtain higher rewards under the same network conditions.

For more information on the product, please refer to the Chinese product news release : <https://mp.weixin.qq.com/s/C0qkMyxlOYC5zDdZQV5qjw>.

OEC
支持网络新共享，闲置资源赚零花

- 共享宽带**
共享闲置宽带资源
加入边缘计算网络
- 性能升级**
4核CPU、千兆网口
提供强大性能支持
- 方便快捷**
接入电源和网线
即可自动运行
- 轻松提现**
绑定网心云APP
一键提现到账
