On May 19th, 2025, Huawei officially announced the launch of its first computers equipped with the HarmonyOS system. The Xunlei Download application and Xunlei Player will be pre-installed as default applications and are set to debut alongside the initial release of the HarmonyOS computer.

Last December, Xunlei Download products were among the earliest applications adapted for HarmonyOS and made available to enhance user experience across mobile phones, tablets, and other devices. Xunlei has consistently supported the development of its domestic operating ecosystem. In the PC domain, it promptly adapted its download, video player, and other products for the PC version of HarmonyOS. With the official launch of Harmony OS for PCs, Xunlei once again stands as one of the pioneering products, offering users a seamless multi-device experience while collaboratively creating convenient office and lifestyle scenarios.

In terms of system compatibility, the native version of Xunlei on HarmonyOS is capable of receiving real-time feedback regarding network congestion from the system. In weak network conditions, it will automatically prompt users to switch video resolution, thereby effectively minimizing stuttering and delays during video playback. Furthermore, when users click on a Xunlei download link, the system seamlessly redirects to the Xunlei app to initiate the download process, enhancing the smoothness of the transition.

Functionally, Xunlei can provide Huawei HarmonyOS users with capabilities such as ultra-large cloud storage, high-speed downloading, and high-definition video playback. Additionally, Xunlei Player offers a comprehensive set of features, including online subtitle support, cloud playback, screen adjustment, audio track switching, speed control, and compatibility with over a hundred high-definition video formats, all designed to enhance user experience.

In the future, Xunlei will remain committed to iterate product functionalities and service

experiences, contributing to the robust development of the domestic HarmonyOS ecosystem and delivering an optimizing high-quality services tailored for Harmony OS users.
